

SPRING FIELD DAYS

Field Days

Come along to our pasture walks and learn about the values and management of native grasslands as pastures. Our grassland team will lead walks in the morning to discuss the different types of plants that are in our native grasslands and how they grow. In the afternoon we will travel to some of our trial sites to see how grazing management and seeding into these grasslands has affected their biomass and biodiversity values.

Both days will include interactive talks with grassland experts:

Nicola Barnes – grassland ecologist

Anne Brown – native pasture management

Andrew Fairney – native grassland restoration

RSVP by 23/09/22
